

API800 Series Bottom Loading Coupler

The best coupler just got better.

Built with a stainless steel latch release handle and coming in at 8.5kg the slimline Liquip API800 Series coupler is impressive by any measure.

With a robust design and fast in-situ replacement of all seals, customers will experience effortless bottom loading.

All of the distinctive and well built features customers have grown to love in Liquip's API couplers have been further improved for safe and effective product transfer.

Liquip has considered each detail of the coupler with the user in mind to maximise the safety, performance, service life and quality of the coupler.

Key Features

- All seals are replaceable in situ.
- Fast in-field replacement of all seals on or off the loading arm.
- Stainless steel collar and hard anodised body for increased service life and durability.
- 4 true interlocking stainless steel latches for secure coupling and maximum safety.
- Ease of maintenance when replacing major components.
- High quality components for increased operating life.
- Easy to operate handle with a noticeable positive lock.
- Increased site safety via minimal product leakage during disconnect.
- Improved ergonomics during use with less physical strain on users.
- Face seal and poppet seal combined in one seal assembly which allows for ease of inspection/preventative maintenance.
- Ergonomic operating handle and carry loop design for comfortable operation.
- 4 configurations to suit a range of applications.
- New engineered look for ease of locating and identifying the coupler when installed in loading bays.
